

Research Academy Industry for Sustainable Ecosystem (RAISE)

A PRESENTATION FROM
CSIR-CENTRAL LEATHER
RESEARCH INSTITUTE

University - Industry Linkage in Research

Benefits to the Industry

- Access to research at university
- Good use of faculties and students
- Gaining access to competitive minds
- Accelerating the innovation process
- Reputation

Benefits to the University

- Access to real time solutions
- Working on industrial problems
- Funding
- Branding
- Every one job in manufacturing industry creates 2.2 jobs in other sectors

University - Industry Linkages

Link structured knowledge in universities with tacit knowledge in industry

- For industry this accelerates growth
- For academy it helps explore innovative technologies for increased resource and efficiency

Some initiatives to strengthen UIL

- HDFC bank partnership with 50 technology companies, business schools and IIT-B/IIT-R
- MHRD funding for IIT-M to tune of Rs 300 Crores
- India Electronics and Semiconductor Association – IIT – Kharagpur for robust talent pipeline for electronic system design and manufacturing

For better success, R&D wings of academy need to be strengthened to avoid home grown companies betting for their requirements elsewhere

Identified Priorities to Strengthen UIL

- Multilayered policy interventions to facilitate UI synergy
- Entrepreneurial eco-system
- Industry reorientation of university programs and curricula
- Developing university – industry connect
- Mobility between industry and university
- Technology Innovation Centres

Global Scenario in UIL

12.04 University-industry collaboration in R&D

In your country, to what extent do business and universities collaborate on research and development (R&D)? [1 = do not collaborate at all; 7 = collaborate extensively]

| Rank/137 | Country / Economy | Score | Trend | Distance from best |
|----------|----------------------|-------|-------|--------------------|
| 1 | Switzerland | 5.8 | ↗ | ██████████ |
| 2 | United States | 5.7 | ↗ | ██████████ |
| 3 | Israel | 5.7 | ↗ | ██████████ |
| 4 | Finland | 5.6 | ↗ | ██████████ |
| 5 | Netherlands | 5.6 | ↗ | ██████████ |
| 6 | United Kingdom | 5.4 | ↗ | ██████████ |
| 7 | Germany | 5.4 | ↗ | ██████████ |
| 8 | Singapore | 5.3 | ↗ | ██████████ |
| 9 | Belgium | 5.3 | ↗ | ██████████ |
| 10 | Sweden | 5.2 | ↗ | ██████████ |
| 11 | Malaysia | 5.2 | ↗ | ██████████ |
| 12 | Qatar | 5.1 | ↗ | ██████████ |
| 13 | Ireland | 5.0 | ↗ | ██████████ |

UIL – international lessons

Model considered as best is the triple helix model of the United States – Government, industries and universities

The country (government) pushes the interaction from all sides

China has a similar program

Patent – license –start up model to foster growth of startups from within universities

Bayh-Dole Act (1980) incentivized the research activities and usage of innovations. Similar example is the Inventor's law from Germany

| Parameter | US | Germany | Japan | China | Australia | UK |
|----------------------------|--------|---------|----------------------|----------------|----------------|--------|
| UIL | Strong | Strong | Relatively developed | Well developed | Less developed | Strong |
| R&D expenditure (% of GDP) | 2.79 | 2.88 | 3.28 | 2.07 | | 1.7 |
| Global Innovation Index | 4 | 9 | 14 | 22 | 23 | 5 |

UIL – international lessons

Impact of UIL in USA

Good Effects

Rise in offices of technology licensing in Universities

Emergence of diverse pattern of commercial arrangements

- Small companies – 50%, large – 35% and spin-outs – 15%

Increasing trend towards non-exclusive licensing

Increase in income

Negative Effects

Change in nature of academia

Shift of focus from innovation to incremental research

Culture of secrecy

Non protection of public goods

UIL: India Status

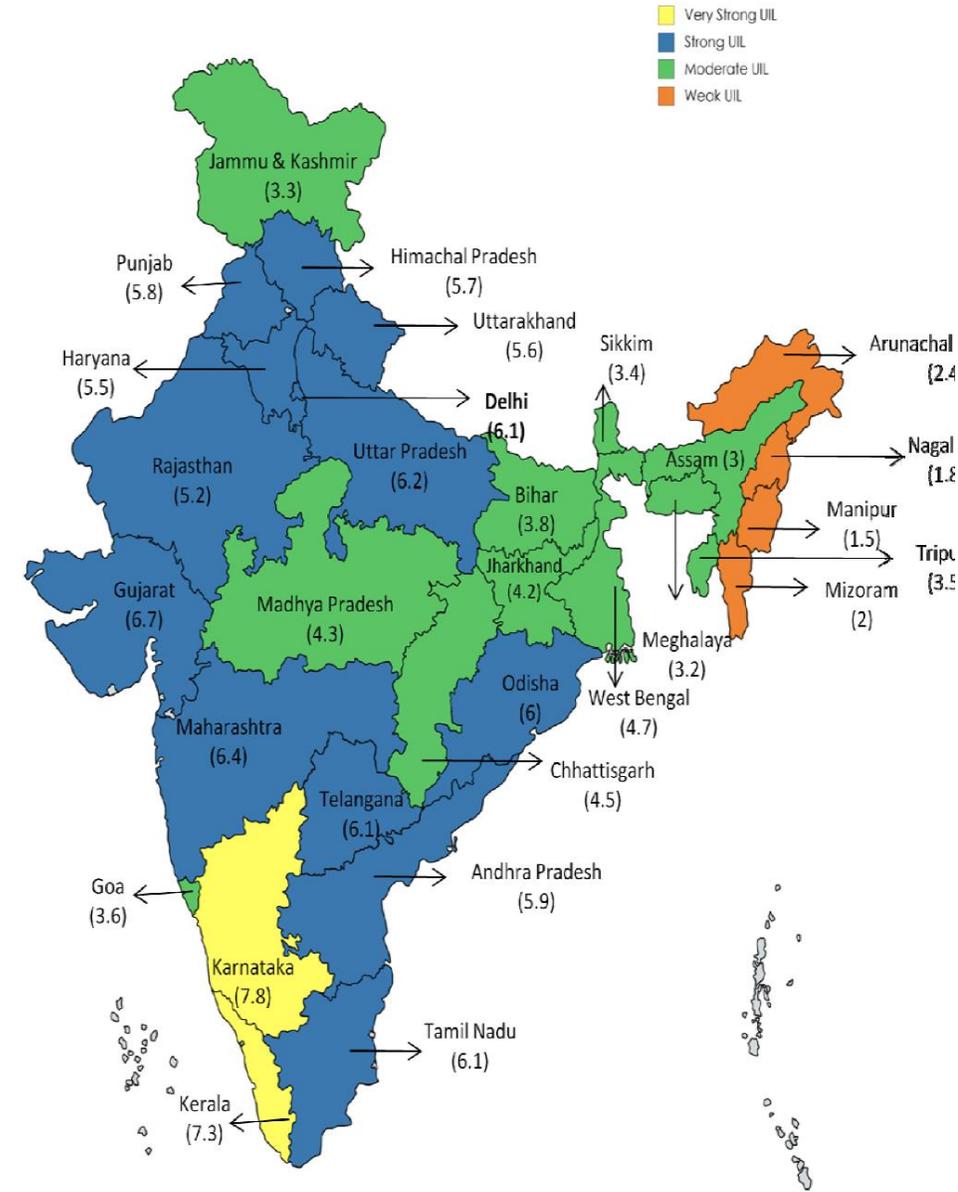

India does not have a legislation to facilitate university – industry linkage in research

Framework for industry – academia connect is weak

Some successful models such as IITK – Boeing, INIT (Karnataka) – Bosch, IITB – Society for Innovation and Entrepreneurship, GITAM – TCS etc. exist

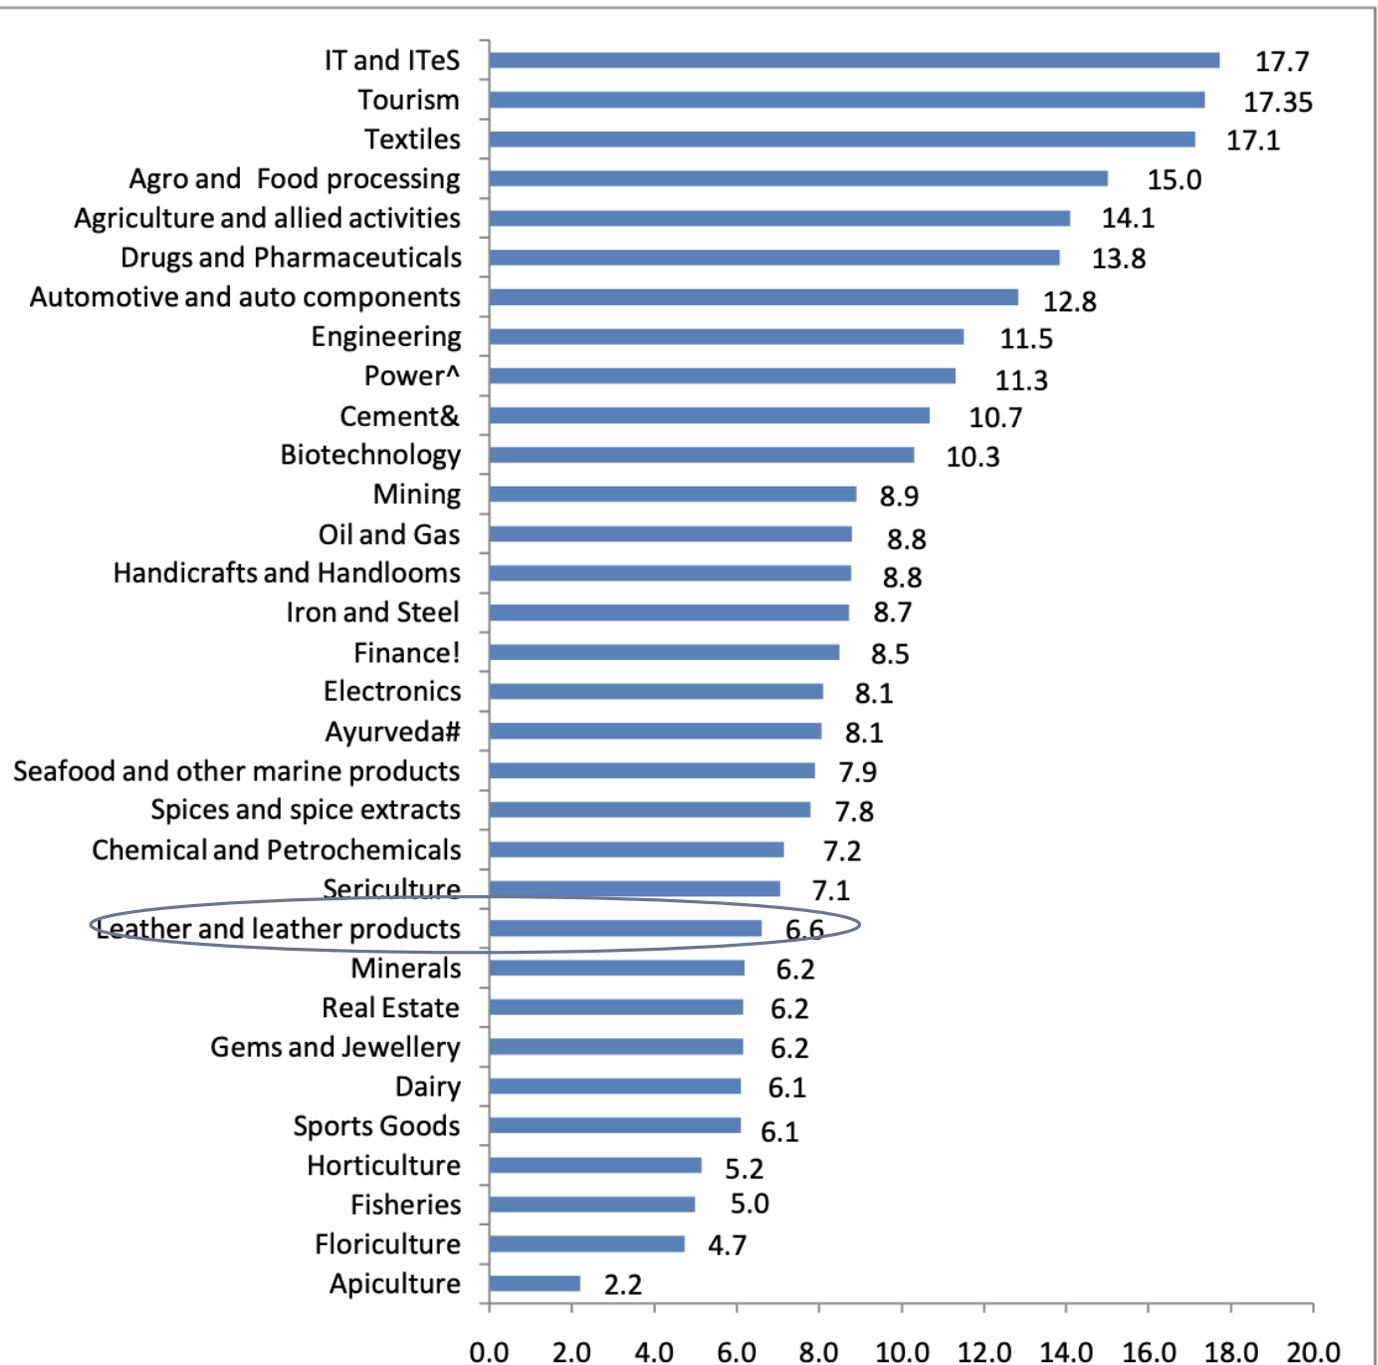

Industries/ industrial associations have partnered with government bodies for skilled manpower development

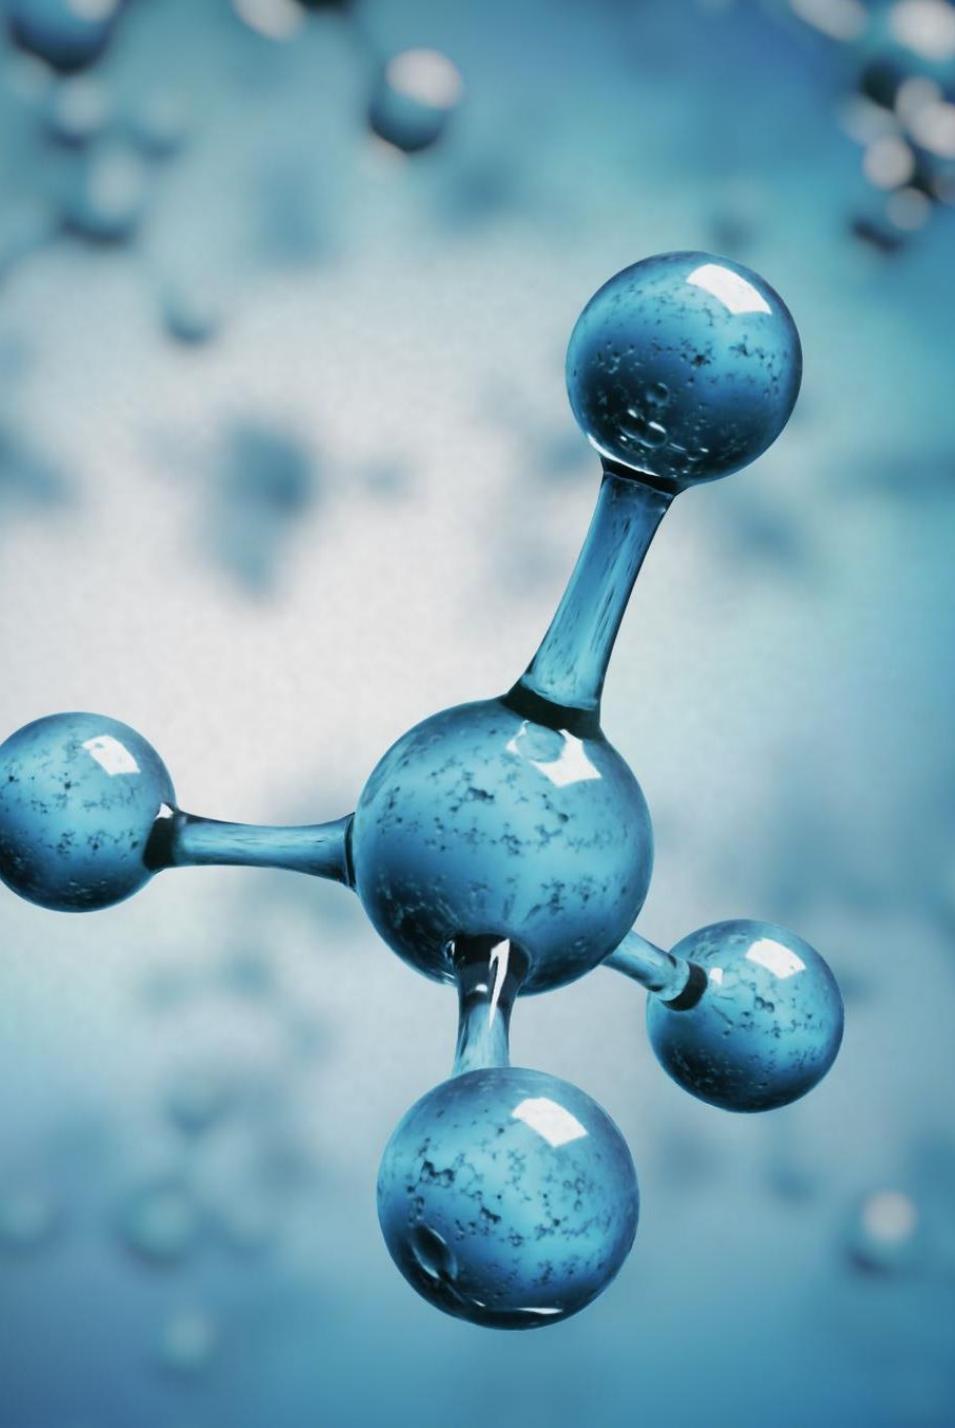

- NASSCOM – UGC; TCS - NSDC

Source: PHD Research Bureau, compiled from the study on Framework for University-Industry Linkages in Research

Sector wise UIL Score

Complementarity Score

Complementarity happens when research in university is useful in the states and vice-versa and if the existing industry is facilitated by research institute, centres of excellence and incubation centres

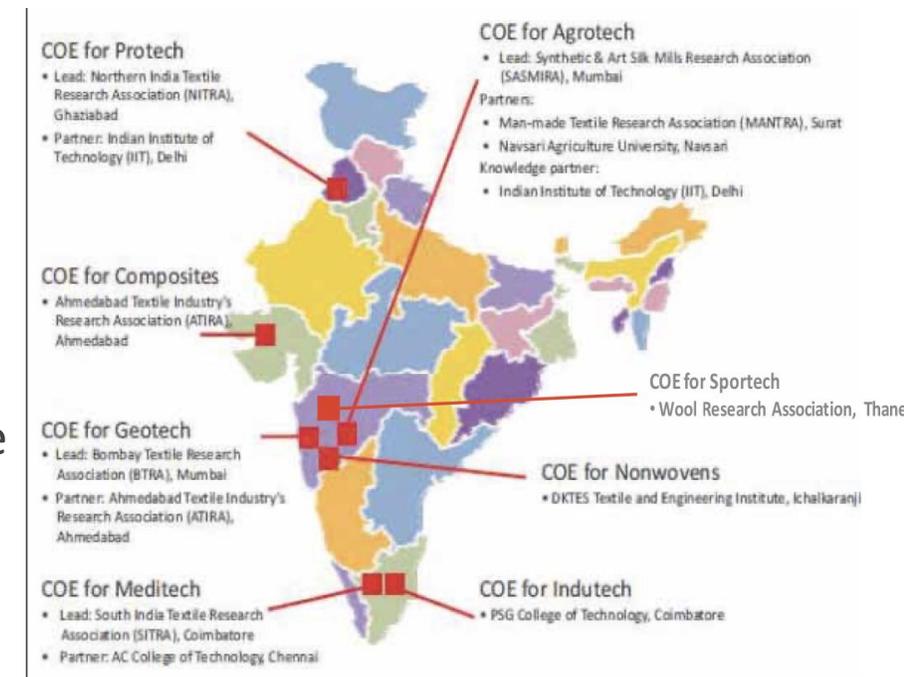

A strong complementarity (Score = 1) is found in tourism, textiles, IT and ITeS, followed by agro and food processing, agriculture, pharma etc. (score = 2) and a medium complementarity is observed in areas such as steel, leather, chemical and petrochemical (score = 3)

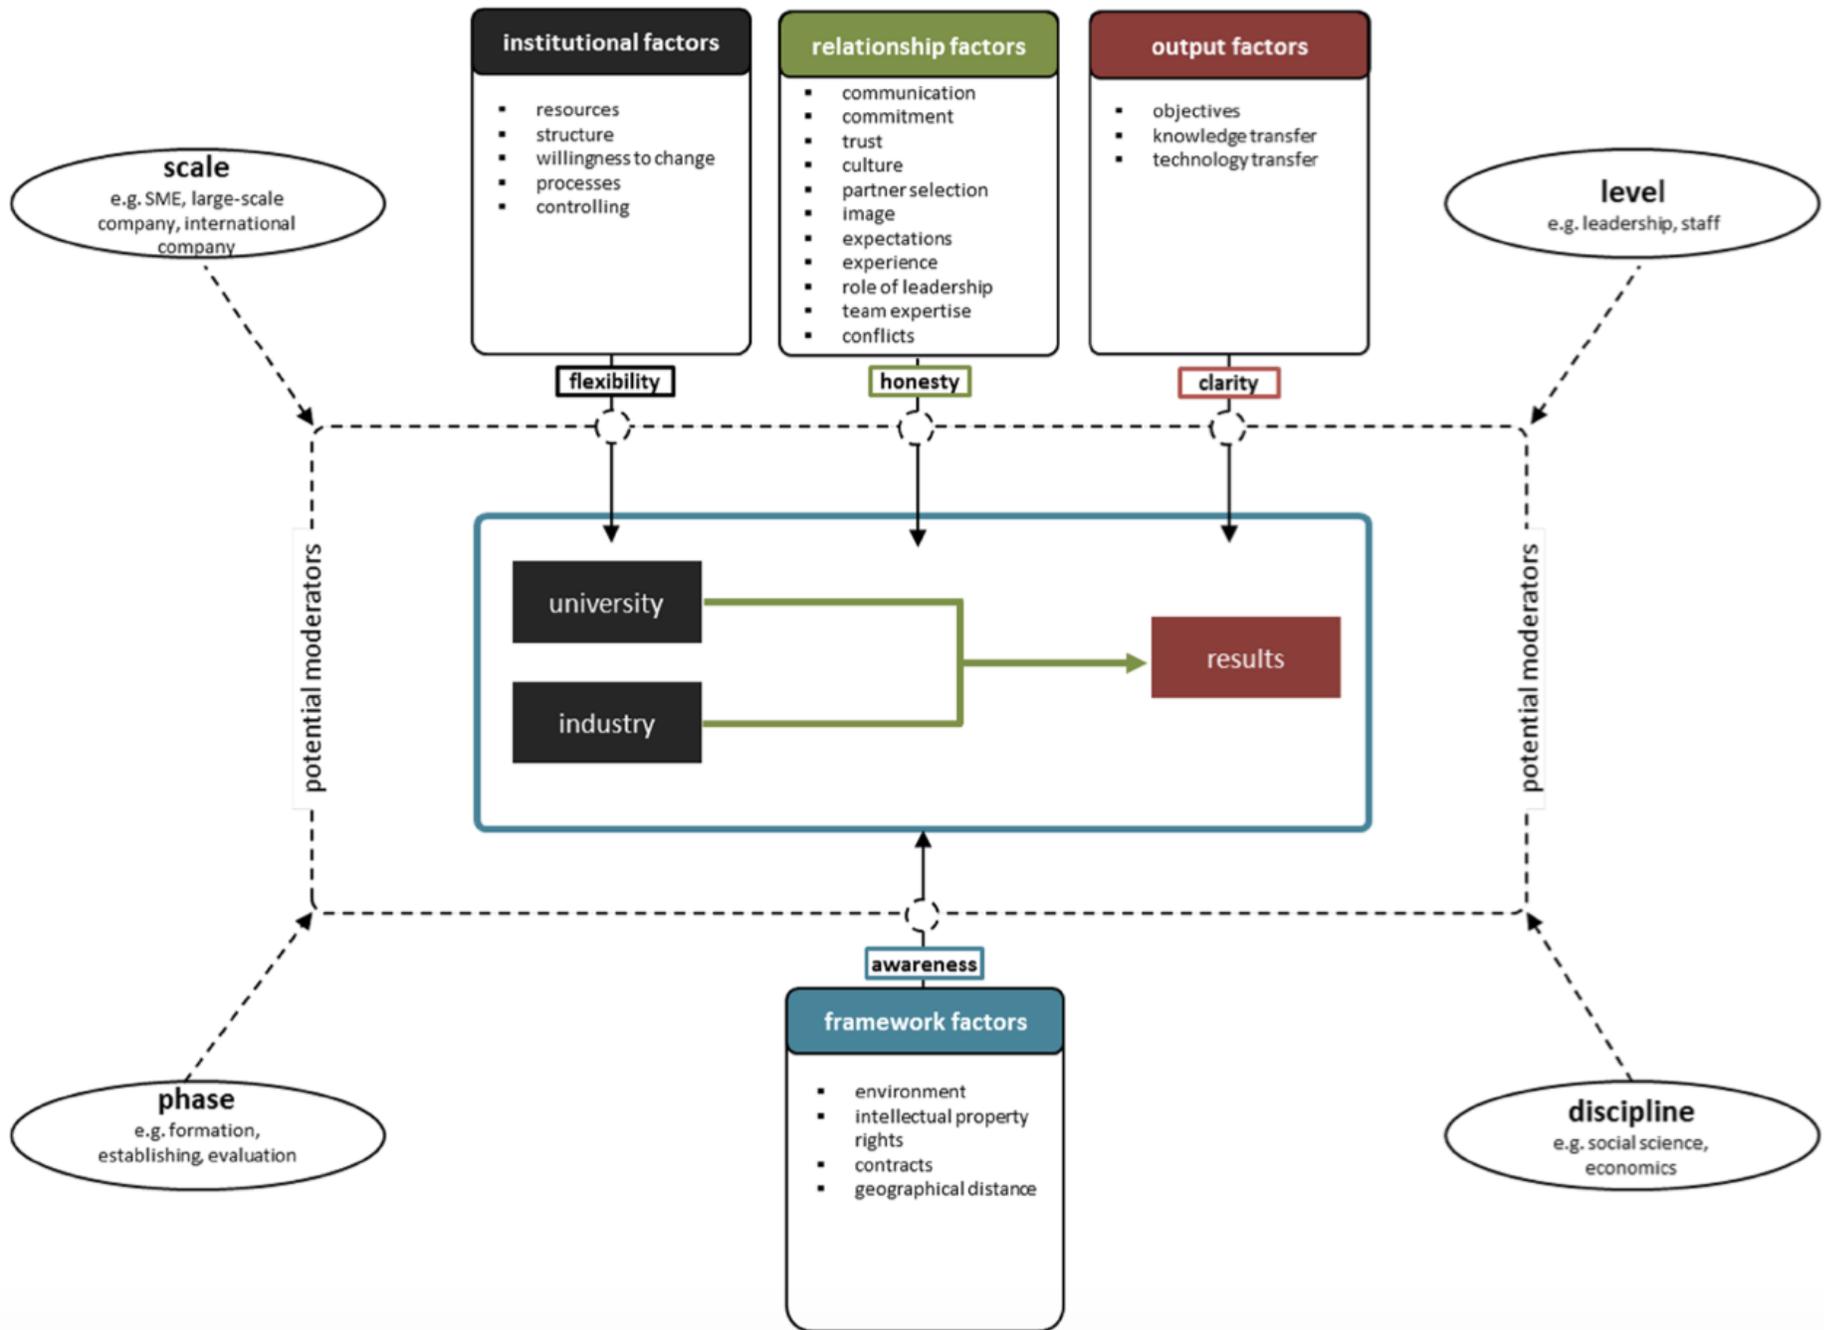

Industries like floriculture, fisheries and apiculture is seen with a score of 4, indicating a weak complementarity

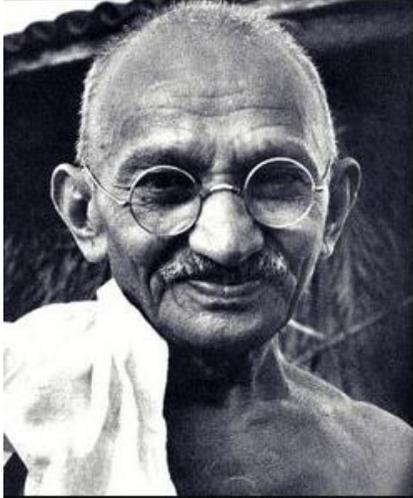

Analyzing the Score of Textiles

Possible reasons for Score of 1 for textiles

- Textile education institutions are predominantly developed and managed by textile industries
- There is a strong presence of textile institutes in the industrial clusters
- A large number of textile institutions have industrial leaders in the academic boards
- NIFT as a partner for design interventions
- A strong linkage between industry and research associations under the ministry – such as ATIRA (Ahmedabad), BTRA (Mumbai), NITRA (North Indian), SITRA (South India) etc.
 - Centres of Excellence created around these bodies
 - Rs. 139 Crore investment, 530 prototypes, 142 BIS standards, 360 Consultancies, 105 DPR

I do not want my house to be walled in on all sides and my windows to be stuffed. I want the cultures of all the lands to be blown about my house as freely as possible. But I refuse to be blown off my feet by any.

(Mahatma Gandhi)

The INDIA scenario

This is the uniqueness of India. We are open to worldwide influences, but we choose to follow our own unique path

A democracy with a billion people and a 5000 plus year civilization has strong likes, dislikes and culture

Academy – Research – Industry Model in Leather

A vibrant partnership with then University of Madras (now Anna University), leather institute (CLRI) and industry enabled the simultaneous generation of technologies and skill sets

Several alumni turned entrepreneurs, thanks to the industrial research environment prevalent at the institute

Industrial investments (direct and indirect) into the institute both in terms of sharing of knowledge and financial was high

Academy of Scientific & Innovative Research (AcSIR) replicates this concept born in CLRI throughout the CSIR

The Leather Scenario in mid 90s

The triple helix model of the US existed in Indian leather from 1948 itself

- **University – Research – Industry relationship in leather transformed a trade into a technology driven industry**

Research at CLRI facilitated development and commercial production of indigenous chemicals specifically tailor made to Indian conditions

By having researchers as faculty, University produced the best minds for industrial needs, without change in academic activities

Institute also worked with the industry to frame appropriate policy for university – research – industry collaboration

Cementing the partnership with academy and industry

Conceived as TGT in 1965

Research welcomes industry
to a continued partnership

Brought Government,
Industry, Research and
Academy on the same
platform

The showhows — taking research to industry

**Students worked with researchers to
develop technologies for the industry**

**Show how during TGTs used by industry
to critically evaluate lab outcomes**

Students learned what industry sought

**Researchers created low hanging fruits
to meet industrial needs**

**Industries gained confidence on
research**

Partnership on a Mission Mode

Took technology to every part of India

Fine tuned technology to meet need of various segments of the industry

Challenges to the Triple Helix Model in Leather Sector

R&D, technology and innovation is more in the research institution

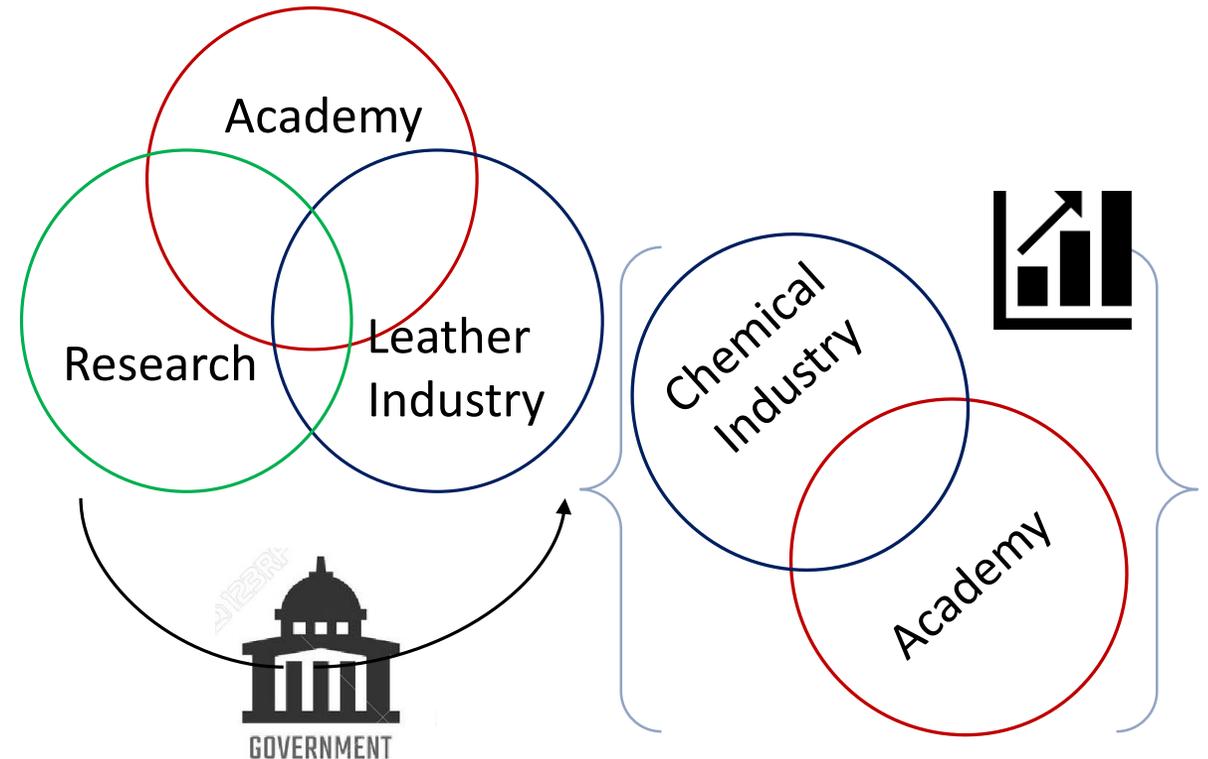

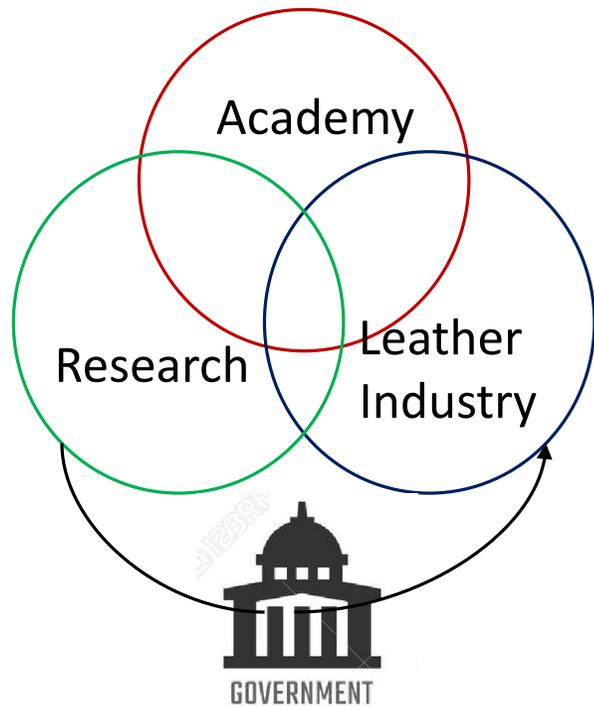

The SME character of the industry provides little scope to take risks in investing in newer technologies

- Government support is sought for technology upgradation/modernization

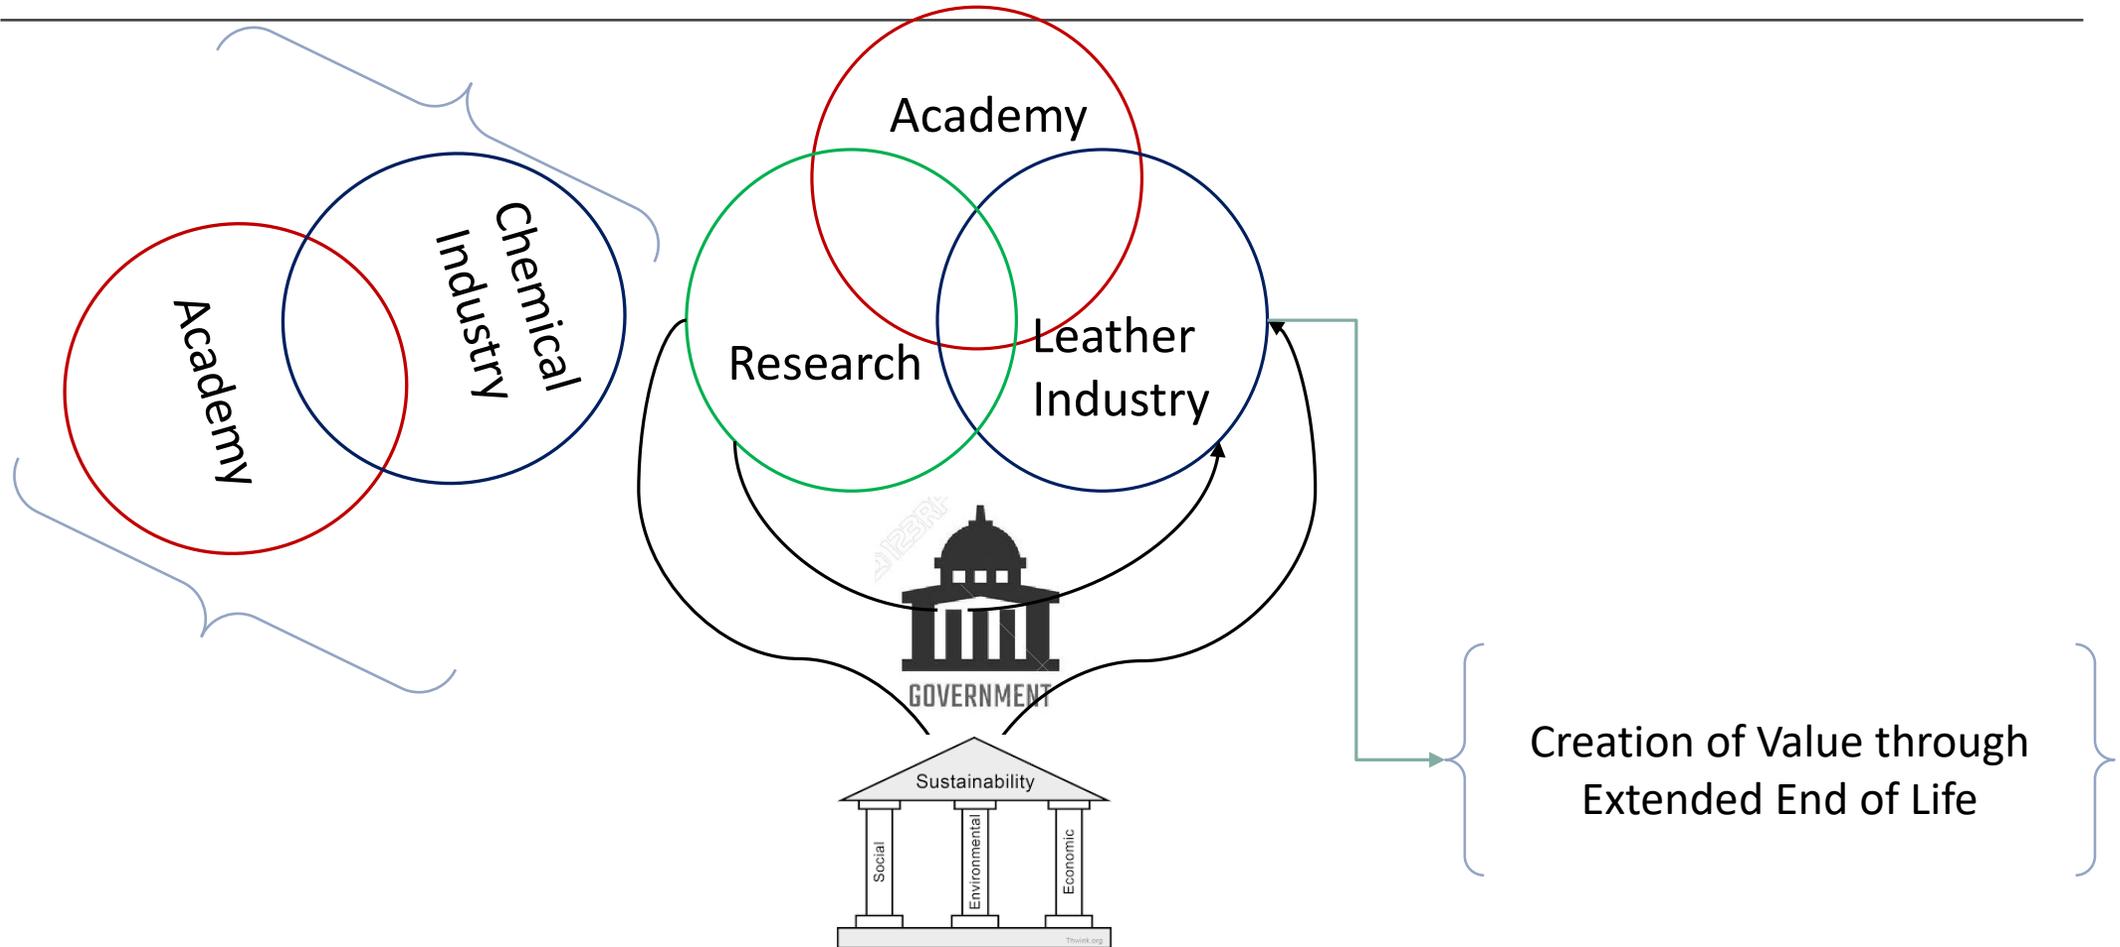

Being a consumer driven industry, process innovations are considered risky

The fluctuating global market on leather is a deterrent to investments on plant and equipment

Perceived Challenges of Triple Helix Model of Leather

The Triple Helix Model for Leather: Way Forward

A Technology Platform for Indian Leather

To bring together various parties – government, business, research, education

- To identify challenges in the near, medium- and long-term scenarios
- Developing a program for strategic research with defined time goals
- Implementation of research outcomes
- Developing skillsets for adopting new innovations in industrial environment

Basic Principles of the Technology Platform

Evaluation of Challenges

Develop research and academic strengths

Ensure sufficient research in long-term priorities and blue sky research

Define ways of realization and implementation including policy support

Combine efforts of all stakeholders

Create start ups and add on units

Promote entrepreneurship and SHGs

What Motivates the Setting up of Technology Platform?

A dark, silhouetted background of a construction site. Scaffolding and structural beams are visible on both sides. In the center, a crane hook is suspended from above, with a dark rectangular object hanging from it. The overall scene is dimly lit, suggesting dusk or dawn.

How does LERIG 2020 Contribute to Building of Technology Platform?

10.00 AM – 11.15 AM

Leather and Leather Products Education

Chairman: Shri Habib Hussain, Director, AVT Group

75 Years of Excellence in Leather Education, Dr J Raghava Rao, Chief Scientist, CSIR-CLRI Design and Technology Education for Footwear & Leather Products Industries- Present Trends, Challenges & Future Directions, Dr M Aravendan, Professor, NIFT Empowering Leather Sector by Skilling, Dr Swarna V Kanth, Senior Principal Scientist, CSIR-CLRI

11.15 AM – 11.30 AM

TEA BREAK

11.30 AM – 01.00 PM

TECHNICAL SESSION II

Sustainability of Leather Sector

Chairman: Dr B Chandrasekaran, Former Director, CSIR-CLRI

New Chemistry for Sustainable Leather Chemicals, Dr V Vijayabaskar, Chief Manager, M/s Balmer Lawrie & Co

Sustainable Development of Leather Value Chain in India, Shri A Sahasranaman, Vice-Chairman, CEMCOT

Chemicals for Sustainable Leather Manufacture, Shri M Prasanna, Campus Manager, M/s Stahl India Pvt Ltd

Green Beamhouse – A Toolbox for Cleaner Wastewater Shri P Rajasekaran, Head of BU (India) M/s Lanxess

Measures for sustainable development in Leather Products, Shri TR Sankaranarayanan, Associate Professor, NIFT

Let us create a
platform to
RAISE the
leather industry
